                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                             The present sequence represents the capsular gene cluster of Streptococcus suis serotype 1. The genes in this cluster are involved in Streptococcus suis serotype 1. The genes in this cluster are involved in polysaccharide biosynchesis of capsular components and antigens. The proteins have glycosyltransferase activities (CpsIH). The capsule confers bacterium resistance to complement-mediated opsonophagocytosis. The gene cluster is used as a source of probes and primers for serotype-specific detection of S. suis and is also useful for recombinant production of the proteins are then useful for producing antigens that can be used in vaccines, for controlling or eradicating a Streptococcal disease,

The present sequence represents the capsular gene cluster of Streptococcus suis serotype 2. The genes in this cluster are involved in polysaccharide biosynthesis of capsular components and antigens. The proteins are involved in regulation (CpsB, CpsC, CpsC, captolation (CpsB, CpsC, CpsC, CpsC, and biosynthesis (CpsE, CpsC, CpsG, CpsG, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC, CpsC,

                                                                                                                                                                                                                                                                                           The present sequence is an eps operon from Streptococcus thermophilus. Proteins encoded by the eps operon function in exopolysaccharide (EPS) synthesis. The operon is useful for producing chimeric eps operons, for optimising production of EPS in lactic acid bacteria. EPS impart texture, mouth feel and rheological properties to fermented food products (e.g. yoghurt). They function as thickeners, to provide free-flowing and creamy texture, and may also have biological activities beneficial to health
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        TAAACTICGITTIGGIATACCTATITAACGTAATTATTAAGCAGTTAAGGATAGCTTTC 360

The invention relates to a novel strain of a lactic acid bacterium that are defined in the specification. The bacterium of the invention may be useful during food preparation, particularly that of beverages and meat, cereal, or dairy products e.g. fermented milk, yoghurt, 'matured' cream, dessert cream, cheese, soft cheese, cheese spreads, cottage cheese, milk-based drinks, dairy product retentates and baby milk, where the products are derived from an animal and/or plant. The current sequence is that of the Streptococcus thermophilus CNCM I-2980 polysaccharide synthesis-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 437 TGAATCACATAAACAAATTCAAAAAATCTTGTTGCATTGGTAGTTTTAGGTACAGAAAT 496

                                         The invention relates to a protein having betal,3-galactose transferase activity, derived from a microbe having an activity of transferring galactose to N-acetyglucosamine by betal,3-bond. The protein can be used in a method for the preparation of a protein having betal,3-galactose transferase activity in which the above transformant is cultured in a medium to form and accumulate a protein having betal,3-galactose transferase activity, and in a method for the preparation of a galactose containing gluside in which a culture liquid of the above transformant or a treated product of the culture liquid of the above transformant or a treated product of the culture liquid of the above transformant or made to be present in an aqueous medium, and a galactose-containing gluside is formed and accumulated in the aqueous medium. The galactose-containing gluside is used as a candidate for infection preventors. This sequence represents DNA encoding betal,3-galactose transferase proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      975 AGTTAACCTGCTTAACTGTTGATCAAGCTTTTATTAACATACCCATTGAATTATTTGGTA 1034

cellular inactivation or geath is deleted or functionally deactivated, producing (M1) a tumouricidal immunocyte population in vivo in a mammal by allowing tumour associated lipids to contact immunocytes in which receptors for immunosuppressive fatty acids, ceranides, gangliosides, sialylated glycans, lipopeptides and proteoglycolipids are inactivated or deleted, a construct useful in the treatment of cancer comprising a capture of SAB) nucleotide inserted into a virus, a mammalian T cell useful in the treatment of cancer comprising a compressing a lipid raft conjugated to a superantigen, which the treatment of cancer (where an adaptor protein, which cancer (comprising a lipid raft conjugated to a superantigen), producing (M2) a tumouricidal immunocyte population ex vivo in a mammal (by allowing tumour associated lipids to contact immunocytes, in which receptors for the tumour associated lipids are inactivated or deleted to produce a cutvated immunocytes population, and administering the tumouricidal APC contact APCs, in which receptors for the tumour associated lipids are inactivated or deleted to produce a tumouricidal and administering a tumouricidal by allowing a tumour associated lipids are inactivated or deleted or produce a tumouricidally activated population, or a mammal (by allowing a tumour associated lipids to contact APCs, in which receptors for the tumour associated lipids to contact T cells, in which adaptor proteins, which inhibit T cell or activated to produce a tumouricidal population of T cells, and administering the tumouricidally activated T cells to the host), treating deactivated to produce a tumouricidal population of T cells, and administering the tumouricidally activated T cells to the host), treating (M5) cancer in a mammal Boy administering a lipid and antigens, are deleted or functionally activated T cells to the host), treating to binds immunosuppressive tumour associated lipids in vivo in a mammal C cumour associated antigen to contact T cells averaged antigen to contact mammala con The invention relates to a mammalian cell receptor, useful in the treatment of cancer, which binds to tumour associated lipids and induces anergy or apoptosis in the T cells and antigen presenting cells (APCs). Also included are a mammalian cell useful in the treatment of cancer where the receptor which binds tumour associated lipids and induces cellular inactivation or death is deleted or functionally deactivated, tumouricidal T cell population ex vivo in a mammal comprising allowing a sequence encodes an anti-tumour protein which is co-administered with or superantigen-lipid raft conjugate to contact immunocytes in vivo. The receptors, methods and compositions are useful for treating cancers and tumours. Bacterial superantigens are co-administered or administered as specification, but was obtained in electronic format from the US patnet office website at "segdata.uspto.gov/sequence.html?bocID=20020177551" incorporated into a fusion construct with a superantigen. Note: The sequence data for this patent did not form part of the printed The present fusion constructs with anti-tumour proteins or motifs. Example 2; Page; 167pp; English

regular activation by receptors specific for lipid-based tumour associated antigen. The receptor has cytostatic and antimicrobial properties and is suitable for use in gene therapy. The receptors, methods and compositions are useful for treating a neoplastic disease or tumour (cancer), and infectious diseases. This sequence represents a moiety, the DNA of which can be transfected into a cell surface moiety, the DNA of which can be transfected into a cell with superantigen DNA to generate antitumour immunity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        TGGTATACCTATTTAACGTAATTATTAAGCAGTTTAAGGATAGCTTTCTATTTTCGACAA 372

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        75
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to compositions and methods for detecting group B Streptococci (GBS) Streptococcus agalactiae capsular polysaccharide synthesis (cps) gene in sample. The invention is useful for detecting S. agalactiae in a sample. The present sequence is S. agalactiae cps gene. This sequence is used to illustrate the method of the invention.

This invention relates to a novel method of typing a group B streptococcus (GBS) bacterium which comprises analysing the nucleotide sequence of one or more regions within the cpsb, cpsE, cpsE, cpsE and/or cpsl/M genes of the bacterium, where the regions comprise one or more nucleotides having sequences that vary between types. The method is useful for preparing a composition for serotyping and/or subtyping a GBS bacterium for diagnosing GBS infections in pregnant women, elderly and/or immunocompromised patients. The present sequence is that of a consensus DNA sequence for the 3' and of the cpsD-cpsE-cpsE and the 5' end of the cpsC sequences of group B Streptococci which is related to the method of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            312

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence represents a fragment of the EPS plasmid derived from L. lactis subspecies cremoris Ropy352. The EPS plasmid is about 32 kb in size and encodes at least 13 active genes allow the bacteria to produce an exopolysaccharide, designated genes allow the bacteria to produce an exopolysaccharide, designated EPS352. When EPS352 is expressed in or added to milk, it imparts highly desirable sensory characteristics to the milk, including making the milk very thick, with a very smooth mouth-feel, and slightly sweet with an obvious chewable-bite. Open reading frames (ORF's) M and N show homology or oflycosyltransferase involved in EPS352 biosynthesis. L. lactis accession number NRRL B-30229. EPS352 biosynthesis. L. lactis accession number NRRL B-30229. EPS352 is useful for thickening a liquid selected from milk, a milk-based liquid, a an additive in pharmaceutical products, beauty care products and coating agents. It is pharmaceutically in the specification that there is an additional ORF between those encoding EpsE and Eps0. This encodes EpsF (AAB47425). However, this ORF is not indicated on the actual DNA sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      3518 AAAGATCAAGGGCCAATGTTCTATAAACAAAAAGGCTATGGTAAAATGGTAAAATTTTT 3577

The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can

be used to screen compounds in rational drug discovery programmes. The antiense mucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence encodes an essential prokaryotic cellular proliferation protein. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the true of the printed specification.

cc fragments, with any of 9 fully defined sequences (appearing as ADR94308, ADR94899, ADR95423, ADR95642, ADR95642, ADR95642, ADR95642, ADR95642, ADR95642, ADR95642, ADR95642, ADR966079) or any of the fully defined sequences appearing as ADR91705, ADR91886, ADR92197, ADR92234, ADR93039, ADR93079, ADR92366, ADR92650 or ADR991886, ADR92197, ADR92234, ADR93039, ADR93079, ADR92366, ADR92650 or CC ADR99476 or at least 40, 60 or 30 consecutive mucleotides of the nucleotide sequence. Sequences, or at least 40, 60 or 300 consecutive mucleotide sequence. CC red nucleic acids and proteins are chosen from $206 disclosed sequences. CC Also included are a recombinant expression vector comprising the isolated nucleic acid cited above operably linked to a transcription regulatory comprising at least 20 consecutive nucleotides of the nucleotide sequences as cited above. The methods and compositions of the present sequences as cited above. The methods and compositions of the present invention are useful for the diagnosis, prevention and/or treatment of pathological conditions resulting from bacteraemia, meningitis and citis media. The present sequence is one of the 2603 disclosed S. CC patenn did not form part of the printed specification, but was obtained correct or sequence. The pathological conditions to the printed specification, but was obtained correct conditions to the printed specification, but was obtained correct conditions to the printed specification, but was obtained correct conditions to the printed specification, but was obtained correct conditions to the printed specification, but was obtained correct conditions to the printed specification, but was obtained correct conditions to the printed specification, but was obtained correct conditions to the printed specification, but was obtained correct conditions to the printed specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         'n,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          373

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     5245 CCCTTGAATTTATGAGTAAGGGTGAAAACGTATCCAACAATTGGGTCCTTTCAAAGTTG 5304
                                                                                                                                                                                                            Proteins encoded by the eps operon function in exopolysaccharide (BPS) synthesis. The operon is useful for producing chimeric eps operons, for optimising production of BPS in lactic acid bacteria. BPS impart texture, mouth feel and rheological properties to fermented food products (e.g. yoghurt). They function as thickeners, to provide free-flowing and creamy texture, and may also have biological activities beneficial to health
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   312
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             612
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    732
                                                                                                                                                                                                                                                                                                                                                                                                                                           72
                                                                                                               nucleic acid fragments containing exopolysaccharide operon, useful for increasing exopolysacchride synthesis in lactic acid bacteria.

The operon contains 10 open reading frames, and encodes enzymes (eps1, eps2, eps3, eps5, eps5, eps7, eps8, eps9 and eps10) that are involved in the biosynthesis of exopolysaccharides (EPS). The enzymes catalyse the formation of specific intersugar bonds. The enzymes catalyse a process that includes at least one step of forming a bond (in alpha or beta anomeric form) between C1, carrying the reducing aldehyde group of an activated Defalp (galpu (cose in pyranose form), and a phosphate group on a lipophilic or proteinaceous primer. The enzymes are used to produce EPS that have antitumor or probiotic properties or are

The present sequence encodes enzymes involved in the biosynthesis of exopolysaccharides (EPS). These enzymes are designated EPS1-EPS10. and are encoded by open reading frames eps1-eps10. The enzymes are isolated from Streptococcus thermophilus strain Si139. The proteins are used in a method for the synthesis of EPS, which includes at least one step of forming a bond (alpha or beta-isomer) between C-1 (carrying the reducing aldehyde function, of an activated D-galactose pyranose), and a phosphate on a lipophilic or proteinaceous primer. Stepwise synthesis of EPS occurs with, in each step, addition of a new sugar unit, through its hemi-acetyl function, to an alcoholic hydroxyl of a second sugar unit, present at the cond of a chain of sugar residues bonded to the primer. EPS1 to EPS4 are used to elongate the EPS chain, and to regulate EPS production, EPS5 creates new bonds between saccharides, EPS6 is used in the biosynthesis of EPS, EPS7 and EPS8 are beta-glycosyltransferases, EPS9 is a transporter of repetitive units, and EPS10 catalyses the conversion of a pyranose form of a beta-D-galactose to the furanose form. The EPS enzyme or properties of foods, particularly fermented milk proporties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New recombinant enzymes for synthesis of exopolysaccharides, particularly in lactic acid bacteria, for improving properties of fermented milk
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                products such as yoghurt and cheese, e.g. their organoleptic properties and flavour stability
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAY54068, AAY54069, AAY54070

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is an eps operon from Streptococcus thermophilus. Proteins encoded by the eps operon function in exopolysaccharide (EPS) synthesis. The operon is useful for producing chimeric eps operons, for optimising production of EPS in lactic acid bacteria. EPS impart texture, mouth feel and rheological properties to fermented food products (e.g. yoghurt). They function as thickeners, to provide free-flowing and creamy texture, and may also have biological activities beneficial to health
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New nucleic acid fragments containing exopolysaccharide operon, useful e.g. for increasing exopolysacchride synthesis in lactic acid bacteria

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is an eps operon from Streptococcus thermophilus. Proteins encoded by the eps operon function in exopolysaccharide (EPS) synthesis. The operon is useful for producing chimeric eps operons, for optimising production of EPS in lactic acid bacteria. EPS impart texture, mouth feel and cheological properties to fermented food products (e.g. yoghurt). They function as thickeners, to provide free-flowing and creamy texture, and may also have biological activities beneficial to health
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New nucleic acid fragments containing exopolysaccharide operon, useful e.g. for increasing exopolysacchride synthesis in lactic acid bacteria

Proteins encoded by the eps operon function in exopolysaccharide (BPS) synthesis. The operon is useful for producing chimeric eps operons, for optimising production of EPS in lactic acid bacteria. EPS impart texture, mouth feel and rheological properties to fermented food products (e.g. yoghurt). They function as thickeners, to provide free-flowing and creamy texture, and may also have biological activities beneficial to health
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      sic acid fragments containing exopolysaccharide operon, useful increasing exopolysacchride synthesis in lactic acid bacteria.
                                                                                                                                                                      Exopolysaccharide, lactic acid bacterium; eps; fermented food product;
